Programming Assignment 5

### Use Case Scenarios

1.

|                            |  |
|----------------------------|--|
| Use Case:                  | Viewing event information  |
| Description                | Admin wants to view how many tickets were bought for a specific event  |
| Pre-Condition              | Admin has signed on to ticket miner  |
| Post-Condition             | Admin has view event information   |
| Error                      | The event selected does not exist  |
| System Static during Error | Print error message  |
| Actor                      | Admin  |
| Trigger                    | Admin wants to know how many tickets were bought for a certain event   |
| Process                    | <ol style="list-style-type: none"><li>1. Admin enters name of an event</li><li>2. Admin selects the menu option to view event information</li></ol>      |
| Alternative Process 1      | <ol style="list-style-type: none"><li>1. Admin enters event ID of the event</li><li>2. Admin selects the menu option to view event information</li></ol> |

2.

|                            |  |
|----------------------------|--|
| Name                       |  |
| Description                |  |
| Pre-Condition              |  |
| Post-Condition             |  |
| Error                      |  |
| System Static during Error |  |

|                       |  |
|-----------------------|--|
| Actor                 |  |
| Trigger               |  |
| Process               |  |
| Alternative Process 1 |  |
| Alternative Process 2 |  |

3.

|                            |  |
|----------------------------|--|
| Name                       |  |
| Description                |  |
| Pre-Condition              |  |
| Post-Condition             |  |
| Error                      |  |
| System Static during Error |  |
| Actor                      |  |
| Trigger                    |  |
| Process                    |  |
| Alternative Process 1      |  |
| Alternative Process 2      |  |
